## Evening Brief

Date/Time Stamp: **Saturday, August 20, 2016 - 10:25 PM**

---

### Weather Summary

**\*\*\* High Risk for Lightning Sunday-Monday across Western and Northern NV \*\*\***

Moisture will begin to push north again across NV/UT Sunday with thunderstorms as far northwest as the Sierra Front and the Tahoe Basin by late Sunday. Thunderstorms should then overspread most of Nevada and even parts of southwest Idaho on Monday. Latest computer models suggest a fairly widespread area of mixed wet and dry lightning across much of Nevada, with **High Risk issued for Sunday and Monday** in areas that have the **best combination** of **lightning, minimal rainfall, and dry fuels**.

A dry cold front will push across Idaho Mon-Tue. This will bring drier WNW winds across much of the region, including many areas that are expected to be impacted by lightning.

Thunderstorm activity is expected to be **wet** across southern Utah and southern Nevada.

---

### Preparedness Levels

**Current:**

Great Basin	4
National	4

---

**Great Basin Fire Activity: Light Initial Attack**

**New Fires and Acres: 11 fires for 955 acres / 2159 acres Large Fire Growth**

---

### Resources:

- Helicopters within the Great Basin
  - 16 Type 1 Helicopters / 12 Committed
  - 14 Type 2 Helicopters / 9 Committed
  - 27 Type 3 Helicopters / 15 Committed
- 90 Crews are committed within the Great Basin
  - To date Great Basin incidents have ordered/filled 209 IHCs
  - 17 IHCs committed within the Great Basin
  - 48 Type 2IA Crews committed within the Great Basin
  - 57 Crews committed within Boise Dispatch Center
  - 17 Pending Crew orders

## Great Basin Fire Potential Summary

ERC's are still very high with many areas above the 97th percentile across the north and west where conditions have remained generally dry. Recent, and expected future wet thunderstorms over southern UT and southern NV, should keep fire danger low in those areas.

Fire potential will increase across the northern half of Nevada Sunday into Monday as subtropical moisture pushes up from the south, and interacts with a cold front dropping down from the Pacific NW.

Some of our driest fuels are across western Nevada, where dry lightning is expected.

**A Fuel and Fire Behavior Advisory** is also in effect for the Northern half of Nevada, Southwest Idaho and Northwest Utah.

**A Fuel and Fire Behavior Advisory** is also in effect for the Northern half of Nevada, Southwest Idaho and Northwest Utah.
